## 2 Functional Description

The Multi Input/Output 12 (MIO-KNX 12) is a modular installation device for installing in a distribution board on 35 mm mounting rails. It integrates a 12 fold binary input as sensors and a 12 fold binary output as actuator in one housing.
Connection to the EIB / KNX is implemented via a 2 screw terminal.
The actuators switch up to 12 independent electrical loads via potential free contacts (bistable relays). The outputs are connected using screw terminals.
Each output is controlled separately via the EIB / KNX.
The actuators are particularly suitable for switching ohmic loads.
The 12 -fold Binary Input part has 12 independent inputs for sensing potential free floating contacts such as conventional switches and push buttons.
The device provides a scanning voltage with a pulse (peak voltage 18 V ).
The internal supply is carried out via externally connected 230 V .

### 2.1 TECHNICAL CAPABILITIES

After connecting the MIO-KNX12 to the bus the behaviour of every input and output can be set with the help of the ETS3/ETS4. A button connected to an input of the MIO-KNX12 can not only switch the respective output of the MIO-KNX12, but via the bus it can also be used for the switching of the outputs of other actuators.
Inputs and outputs can be used completely independently (uncoupled) from each other. A very special and convenient characteristic of the MIO-KNX12 is that inputs and outputs can also be coupled in two times 6 or all 12 together. Further to this inputs and outputs can be used a half coupled and a half uncoupled.
Every input can be parameterised and used as with a binary input device, and every output can be used and parameterised as with a switching actuator.

## 3 Overview

### 3.1 InPuTS

Inputs may have the following functions (or may be "not active"):

- Sun protection
- One-Button Shutter
- Dimming (or One-Button)
- Switch (Switch short/long)
- Send Value (Percent)
- Send Value (Angle)
- Send Value (Temperature)
- Send Value (Forced)
- Send Value (8-bit)
- Send Value (16-bit)
- Counter Reset
- Blinds
- Counter Threshold
- 1-Bit Scene
- Scene
- Counter
- Interlock

### 3.2 OUTPUTS

Outputs may have the following functions (or may be "not active"):

- Switch
- Staircase
- Block
- Forced
- Scene
- State
- Logic
- Operating counter
- Switching counter
- Operating counter limit reached
- Switching counter limit reached
- Reset counter

### 3.2.1 BLOCK DIAGRAM

Following functions and their control are possible over the bus:

### 3.2.2 FUNCTIONS PRIORITIES

Regarding the switching behaviour of the actuator each function has a certain priority.
The weighting of the functions can be taken from the following table:

| Priority | Function |
| :---: | :--- |
| Highest Priority | Priority function |
| $\boldsymbol{\nabla}$ | Behaviour after bus voltage failure |
|  | Logic function |
|  | Behaviour after bus return |
| Lowest Priority | Switching, time, central and scene <br> functions |

## 4 Communication ObJECTs

## NOTE

All communication objects are depending on the respective parameters set in the ETS.

### 4.1 LIST

| Nr. | Name | Function | DPT | Length | Default Flags |  |  |  |  |  | Priority |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | Output A | Switch on/off | DPT 1.001 | 1 bit | C | 0 | W | 0 | 0 | 0 | Low |
| , | Output A | Block | DPT 1.001 | 1 bit | C | 0 | W | T | U | 0 | Low |
| 1 | Output A | Forced | DPT 2.001 | 2 bit | C | 0 | W | T | U | 0 | Low |
| 2 | Output A | Scene | DPT 18.001 | 1 byte | C | 0 | W | 0 | 0 | 0 | Low |
| 3 | Output A | State | DPT 1.001 | 1 bit | C | R | 0 | T | 0 | 0 | Low |
| 3 | Output A | State | DPT 1.001 | 1 bit | C | R | 0 | T | 0 | 0 | Low |
| 4 | Output A | Logic 1 | DPT 1.001 | 1 bit | C | 0 | W | T | U | 0 | Low |
| 5 | Output A | Logic 2 | DPT 1.001 | 1 bit | C | 0 | W | T | U | 0 | Low |
| 6 | Output A | Operating counter | DPT 7.001 | 2 byte | C | R | 0 | T | 0 | 0 | Low |
| 6 | Output A | Operating counter | DPT 12.001 | 4 byte | C | R | 0 | T | 0 | 0 | Low |
| 7 | Output A | Switching counter | DPT 7.001 | 2 byte | C | R | 0 | T | 0 | 0 | Low |
| 7 | Output A | Switching counter | DPT 12.001 | 4 byte | C | R | 0 | T | 0 | 0 | Low |
| 8 | Output A | Operating counter limit reached | DPT 1.001 | 1 bit | C | R | 0 | T | 0 | 0 | Low |
| 9 | Output A | Switching counter limit reached | DPT 1.001 | 1 bit | C | R | 0 | T | 0 | 0 | Low |
| 10 | Output A | Reset counter | DPT 1.001 | 1 bit | C | 0 | W | 0 | 0 | 0 | Low |
| "+13... | Output B-L | Further Outputs |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
| 156 | Input A/B | Sun protection up/down | DPT 1.009 | 1 bit | C | R | 0 | T | 0 | 0 | Low |
| 156 | Input A/B | Dimming on/off | DPT 1.001 | 1 bit | C | R | 0 | T | 0 | 0 | Low |
| 156 | Input A | Switch | DPT 1.001 | 1 bit | C | R | 0 | T | 0 | 0 | Low |
| 156 | Input A | Sun protection up/down | DPT 1.009 | 1 bit | C | R | 0 | T | 0 | 0 | Low |
| 156 | Input A | Dimming on/off | DPT 1.001 | 1 bit | C | R | 0 | T | 0 | 0 | Low |
| 156 | Input A | Send Value (Percent) | DPT 5.004 | 1 byte | C | R | 0 | T | 0 | 0 | Low |
| 156 | Input A | Send Value (Angle) | DPT 5.003 | 1 byte | C | R | 0 | T | 0 | 0 | Low |
| 156 | Input A | Send Value (Temperature) | DPT 9.001 | 2 byte | C | R | 0 | T | 0 | 0 | Low |
| 156 | Input A | Send Value (Forced) | DPT 2.001 | 2 bit | C | R | 0 | T | 0 | 0 | Low |
| 156 | Input A | Send Value (8-bit) | DPT 5.010 | 1 byte | C | R | 0 | T | 0 | 0 | Low |
| 156 | Input A | Send Value (16-bit) | DPT 7.001 | 2 byte | C | R | 0 | T | 0 | 0 | Low |
| 156 | Input A | Counter Reset | DPT 1.015 | 1 bit | C | 0 | W | 0 | U | 0 | Low |
| 157 | Input A/B | Blinds on/off | DPT 1.009 | 1 bit | C | R | 0 | T | 0 | 0 | Low |
| 157 | Input A/B | Dimming | DPT 3.007 | 4 bit | C | R | 0 | T | 0 | 0 | Low |
| 157 | Input A | Blinds on/off | DPT 1.009 | 1 bit | C | R | 0 | T | 0 | 0 | Low |
| 157 | Input A | Dimming | DPT 3.007 | 4 bit | C | R | 0 | T | 0 | 0 | Low |
| 157 | Input A | Counter Threshold | DPT 1.001 | 1 bit | C | R | 0 | T | U | 0 | Low |
| 158 | Input A | 1-Bit Scene | DPT 1.022 | 1 bit | C | R | 0 | T | 0 | 0 | Low |
| 158 | Input A | Scene | DPT 18.001 | 1 byte | C | R | 0 | T | 0 | - | Low |
| 159 | Input A | Counter | DPT 5.010 | 1 byte | C | R | W | T | 0 | 0 | Low |
| 159 | Input A | Counter | DPT 7.001 | 2 byte | C | R | W | T | 0 | - | Low |
| 159 | Input A | Counter | DPT 12.001 | 4 byte | C | R | W | T | 0 | 0 | Low |
| 160 | Input A | Interlock | DPT 1.001 | 1 bit | C | 0 | W | T | U | 0 | Low |
| "+5... | Input B-L | Further Inputs |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
| 228 | Central output function | Switch on/off | DPT 1.001 | 1 bit | C | 0 | W | 0 | 0 | 0 | Low |
| 229 | Central output function | Scene | DPT 18.001 | 1 byte | C | 0 | W | 0 | 0 | 0 | Low |
| 230 | Central output function | Forced | DPT 2.001 | 2 bit | C | 0 | W | 0 | 0 | 0 | Low |
| 231 | Central output function | Interlock | DPT 1.001 | 1 bit | C | 0 | W | 0 | 0 | 0 | Low |
| 232 | Central input function | Interlock | DPT 1.001 | 1 bit | C | 0 | W | 0 | 0 | - | Low |
| 233 | Central function | Heartbeat | DPT 1.001 | 1 bit | C | R | 0 | T | 0 |  | Low |

### 4.2 DETAILS

### 4.2.1 Central functions

NOTE
Each Central function has to be enabled in the respective channel.

| Obj-nr | Object name | Function | Type | Flag |
| :--- | :--- | :--- | :--- | :--- |
| 228 | Central output function | Switch On/Off | 1 bit | CW |
| Vi |  |  |  |  |

Via this object the telegrams will be received to switch the load connected to the output.

| 229 | Central output function | Scene | 1 byte | CW |
| :--- | :--- | :--- | :--- | :--- |
| Via this object the telegrams will be received to recall /store scenes. |  |  |  |  |
| 230 | Central output function | Forced | 2 bit | CW |

Via this object the telegrams will be received to force the load connected to all outputs to a predetermined state. This object has the highest priority function, more than the object "Block".

| 231 | Central output function | Interlock | 1 bit | CW |
| :--- | :--- | :--- | :--- | :--- |

This object is used to block all outputs with a predefined value. Two possible interlock values: 0 or 1 .

| 232 | Central input function | Interlock | 1 bit | CW |
| :--- | :--- | :--- | :--- | :--- |

This object is used to block all inputs with a predefined value. Two possible interlock values: 0 or 1 .

| 233 | Central function | Heartbeat | 1 bit |
| :--- | :--- | :--- | :--- |
| This object is used to generate a heartbeat signal with a predefined cyclic sending. |  |  |  |

### 4.2.2 InPUTS

| Obj-nr | Object name | Function | Type | Fla |
| :---: | :---: | :---: | :---: | :---: |
| 156 | Input A/B, Sun protection up/down | Shutter | 1 bit | CRT |
| This object is used to move the sun protection up or down (if two inputs used). |  |  |  |  |
| 157 | Input A/B, Blinds on/off | Shutter | 1 bit | CRT |
| This object is used to close or open the blinds (if two inputs used). |  |  |  |  |
| 157 | Input A, Blinds on/off | Shutter | 1 bit | CRT |
| This object is used to send a telegram to close or open the blinds (if only one input used). |  |  |  |  |
| 156 | Input A, Sun protection up/down | Shutter | 1 bit | CRT |
| This object is used to move the sun protection up or down and to close or open the blinds (if only one input used). |  |  |  |  |
| 156 | Input $\mathrm{A} / \mathrm{B}$, Dimming on/off | Dimming on/off | 1 bit | CRT |
| This object is used to switch on/off a diming light (if two inputs used). |  |  |  |  |
| 157 | Input $\mathrm{A} / \mathrm{B}$, Dimming | Dimming | 4 bit | CRT |
| This object is used to dim brighter or darker (if two inputs used). |  |  |  |  |
| 156 | Input A, Dimming on/off | Dimming on/off | 1 bit | CRT |
| This object is used to dim brighter or darker a light (if only one input used). |  |  |  |  |
| 157 | Input A, Dimming | Dimming | 4 bit | CRT |

## Multi IO 12

| 156 | Input A, Switch | Switch | 1 bit | CRT |
| :--- | :--- | :--- | :--- | :--- |
| This object is used to switch "on", "off", "toggle" or "Status send". |  |  |  |  |
| 156 | Input A, Send Value (Percent) | Value send | 1 byte | CRT |
| This object is used to send a value predefined in Percent. Sent after a rising edge, on <br> both edges, on short/long, on long of the signal state at the input. <br> 156 | Input A, Send Value (Angle) | Value send | 1 byte | CRT |

This object is used to send a value predefined as an Angle. Sent after a rising edge, on both edges, on short/long, on long of the signal state at the input.

| 156 | Input A, Send Value (Temperature) | Value send | 2 byte | CRT |
| :--- | :--- | :--- | :--- | :--- |

This object is used to send a value predefined as a Temperature. Sent after a rising edge, on both edges, on short/long, on long of the signal state at the input.

| 156 | Input A, Send Value (Forced <br> operation) | Forced value send | 2 bit | CRT |
| :--- | :--- | :--- | :--- | :--- |

This object is used to send a predefined forced operation value. Sent after a rising edge, on both edges, on short/long, on long of the signal state at the input.

| 156 | Input A, Send Value (8-bit) | Value send | 1 byte | CRT |
| :--- | :--- | :--- | :--- | :--- |

This object is used to send a predefined 8 -bit value. Sent after a rising edge, on both edges, on short/long, on long of the signal state at the input.

| 156 | Input A, Send Value (16-bit) | Value send | 2 byte | CRT |
| :--- | :--- | :--- | :--- | :--- |

This object is used to send a predefined 16-bit value. Sent after a rising edge, on both edges, on short/long, on long of the signal state at the input.

| 156 | Input A, Counter Reset | Counter Reset | 1 bit | CWU |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :---: |
| This object is used to reset the counter if defined. | 1 bit | CRTU |  |  |  |  |
| 157 | Input A, Counter Threshold |  |  |  |  |  |
|  |  |  |  |  |  |  |
| This object is used to set a limit/threshold to a defined counter. |  |  |  |  |  |  |
| 159 | Input A, Counter | 1 byte Counter | 1 byte | CRWT |  |  |

This object is used as a counter with one byte length. Counting on rising, falling or both edges.

| 159 | Input A, Counter | 2 byte Counter | 2 byte | CRWT |
| :--- | :--- | :--- | :--- | :--- |

This object is used as a counter with two byte length. Counting on rising, falling or both edges.

| 159 | Input A, Counter | 4 byte Counter | 4 byte | CRWT |
| :--- | :--- | :--- | :--- | :--- |

This object is used as a counter with four byte length. Counting on rising, falling or both edges.
158 Input A, 1-Bit Scene $\mid$ Scene (1 and 2) $\quad 1$ bit $\mid$ CRT

This object is used to recall or learn the output state related to encoded scene number.

| 158 | Input A, Scene | 8 -bit Scene (1 to 64$)$ | 1 byte | CRT |
| :--- | :--- | :--- | :--- | :--- |

This object is used to recall or learn the output state related to encoded scene number.

| 160 | Input A, Interlock | Interlock | 1 bit | CWTU |
| :--- | :--- | :--- | :--- | :--- |

This object is used to block with a predefined value. Two possible interlock values: 0 or 1.
For input B "object number +6 "
For input C "object number +12 "

### 4.2.3OUTPUTS

| Obj-nr | Object name | Function | Type | Default <br> Flag |  |  |
| :--- | :--- | :--- | :--- | :--- | :---: | :---: |
| 0 | Output A, Switch | Switch On/Off | 1 bit | CW |  |  |
| This object is used to switch the load connected to output A to "on" or "off". |  |  |  |  |  |  |
| 1 | Output A, Block | Block | 1 bit | CWTU |  |  |

This object is used to block the load connected to output A on the parameterised state. This object has a high priority function.

| 1 | Output A, Forced | Forced | 2 bit | CWTU |
| :--- | :--- | :--- | :--- | :--- |

This object is used to force the load connected to output A to a predetermined state. This object has the highest priority function.

| 2 | Output A, Scene | 8-bit Scene | 1 byte | CW |
| :---: | :---: | :---: | :---: | :---: |
| This object is used to recall /store scenes. |  |  |  |  |
| 3 | Output A, State | switching status on/off | 1 bit | CRT | This object is used for sending the current switching status of output A after a change. The current switching status of the output is stored in the status object and can be queried via a read request or sent automatically after every object value change if parameterized accordingly.

| 4 | Output A, Logic 1 | AND/OR | 1 bit | CWTU |
| :--- | :--- | :--- | :--- | :--- | This object is used to receive the switching information for the 1st input of an AND or OR logic operation for the respective output.

| 5 | Output A, Logic 2 | AND/OR | 1 bit | CWTU |
| :--- | :--- | :--- | :--- | :--- |

This object is used to receive the switching information for the 2nd input of an AND or OR logic operation for the respective output.

| 6 | Output A, Operating counter | Operating counter 2B | 2 byte | CRT |
| :--- | :--- | :--- | :--- | :--- |

This object is used to count a unit (hours, minutes....). Two bytes length.
Can also be used combined with the Switching counter.

| 6 | Output A, Operating counter | Operating counter 4B | 4 byte | CRT |
| :--- | :--- | :--- | :--- | :--- |

This object is used to count a unit (hours, minutes....). Four bytes length.
Can also be used combined with the Switching counter.

| 7 | Output A, Switching counter | Switching counter 2B | 2 byte | CRT |
| :--- | :--- | :--- | :--- | :--- |

This object is used to count the switching times. Two bytes length.
Can also be used combined with the Operating counter.

| 7 | Output A, Switching counter | Switching counter 4B | 4 byte | CRT |
| :--- | :--- | :--- | :--- | :--- | This object is used to count the switching times. Four bytes length.

Can also be used combined with the Operating counter.

| 8 | Output A, Operating counter limit <br> reached | Operating counter limit <br> reached | 1 bit |
| :--- | :--- | :--- | :--- | CRT

This object is used to evaluate if the operating counter reached the predefined limit.

| 9 | Output A, Switching counter limit <br> reached | Switching counter limit <br> reached | 1 bit |  |  |  |
| :--- | :--- | :--- | :--- | :---: | :---: | :---: |
| CRT |  |  |  |  |  |  |
| This object is used to evaluate if the switching counter reached the predefined limit. |  |  |  |  |  |  |
| $10 \quad$ Output A, Reset counter | Reset counter | 1 bit | CW |  |  |  |
| This object is used to reset all counters. |  |  |  |  |  |  |
| For output B "object number +13" |  |  |  |  |  |  |
| For output C "object number $+26 " \ldots .$. |  |  |  |  |  |  |

## 5 ETS-PARAMETERS

### 5.1 GENERAL

### 5.1.1 GENERAL SETTINGS

The following parameter "Heartbeat" is unique:

Picture 1: General Settings

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Heartbeat | Enabled <br> [Disabled] | If enabled, a heartbeat- <br> signal will be generated. |
| Cyclic sending [s] | $1,3,5,10,15,20,30,45,60$ | Defines the cycle-time for <br> the heartbeat-signal. |
|  | sec |  |
|  | $2,3,4,5,6,7,8,9,10,15,20$, |  |
|  | $30,45,60,120 \mathrm{~min}$ |  |
| $[60 \mathrm{~s}]$ |  |  |
| Value for Heartbeat-Signal | off | on |
|  | [off] | Value which will be sent |
|  |  |  |

Table 1: Parameter General Settings

### 5.2 SETTINGS InPUTS

### 5.2.1 GENERAL SETTINGS InPuTs

Picture 2: General Settings Inputs

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Group settings for Inputs | All channels separated <br> A-L together <br> A-F together / G-L <br> separated <br> A-F separated / G-L together <br> A-F together / G-L together <br> [All channels separated] | Depending on how the channels are <br> going to be used, it is to be defined <br> here if "separated" or "together". <br> WARNING <br> By changing this parameter all <br> settings could be lost! |
| Debounce time [ms] | $10,30,60,120 \mathrm{~ms}$ <br> $[10]$ | Debouncing prevents unwanted <br> multiple operation of the input e.g. <br> due to bouncing of the contact. This <br> time is equal to all inputs. |
| Central Interlock-Object | Enabled <br> Disabled <br> [Disabled] | Enable, if the Central-Interlock-object <br> should be displayed. |
| Startup delay [s] | $0-60$ sec (1, 2, 3.... 60) <br> $[1 ~ s]$ | Time from bus power-up to handling <br> of the inputs. |

Table 2: Parameter General Settings

### 5.2.2 Configuration Inputs

Picture 3: Configuration Inputs

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Function Inputs A/B | Not active <br> Single Channels <br> Dimming <br> Shutter <br> [inactive] | According to parameter group setting. <br> Projected function to be defined here. <br> "Two-Buttons-Dimming and -Shutter" <br> needs two inputs next to each other. <br> Special pages will be faded in for all other <br> functions. The parameters of the inputs <br> can be precisely specified upon these <br> pages. <br> Single channels for function that needs <br> only one input. |

Table 3: Parameter Input-configuration

### 5.2.3 Interlock

Independent of the other settings, the interlock settings are identical for all input functionality. For example Inputs A/B:

Picture 4: Configuration Interlock

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Interlock | inactive <br> active <br> [inactive] | Set active, if the object should be <br> displayed and handled. |
| Interlock state | locked with value 1 <br> locked with value 0 <br> [locked with value 1] | Select with which value the input should <br> be locked. |
| Interlock after reset | enabled <br> locked <br> send read request <br> [enabled] | Determines if the input is locked or <br> enabled after a reset. If necessary a read <br> request can also be sent to get the actual <br> state of this value. |
| Attach to global- <br> interlock | disabled <br> enabled <br> [disabled] | If the central Interlock is enabled, it is to <br> be determined if the single Interlock <br> should "follow" the same state. |

Table 4: Parameter Interlock

## NOTE

If Interlock is activated, changes at the Input will not be considered until the Interlock is inactivated.

### 5.2.4Dimming A/B ... K/L

The following parameters are identical for each channel if accordingly parameterised.
For example Inputs $\mathrm{A} / \mathrm{B}$ :

Picture 5: Parameters Diming
\(\left.$$
\begin{array}{|l|l|l|}\hline \text { ETS-Text } & \begin{array}{l}\text { Range } \\
\text { [Default value] }\end{array} & \text { Comment } \\
\hline \begin{array}{l}\text { Contact Type - Input } \\
\text { A }\end{array} & \begin{array}{l}\text { normally open } \\
\text { normally closed } \\
\text { [normally open] }\end{array} & \begin{array}{l}\text { Defines, if the connected contact at the } \\
\text { input is normally opened (NO) or normally } \\
\text { closed (NC). } \\

$$ \begin{array}{l}Duration which the input needs to be <br>
logical high before dimming is started. <br>
If the input is logical high for a shorter time <br>

only a switch command will be sent.\end{array}\right\}\)| Input A will dim down and switch off. |
| :--- |

Table 5: Parameters Dimming

### 5.2.5Sun Protection A/B ... K/L

The following parameters are identical for each channel.
For example Inputs $\mathrm{A} / \mathrm{B}$ :

Picture 6: Parameters Sun protection

| ETS-Text | Range [Default value] | Comment |
| :---: | :---: | :---: |
| Contact Type - Input A... | normally open normally closed [normally open] | Defines, if the connected contact at the input is normally opened (NO) or normally closed (NC). <br> If NO is selected, the input is logic high, after the contact is closed. |
| ```Contact Type - Input B...``` | normally open normally closed [normally open] | Defines, if the connected contact at the input is normally opened (NO) or normally closed (NC). <br> If NO is selected, the input is logic high, after the contact is closed. |
| Shutter Function A/B | Up/Down Down/Up [Up/Down] | Defines, which input is responsible for Shutter up und which one for Shutter down. <br> Up/Down: <br> Input A will move up. <br> Input B will move down. <br> Down/Up: <br> Input A will move down. <br> Input B will move up. |
| Long operation after... | $\begin{aligned} & 0,3 ; 0,5 ; 0,7 ; 1 ; 1,5 ; 2 ; 2,5 ; 3 \\ & 3,5 ; 4 ; 5,5 ; 6 ; 7 ; 8 ; 9 ; 10 ; 15 ; \\ & 20 ; 30 \text { sec } \\ & \text { [2,0s] } \end{aligned}$ | Duration which the input needs to be logical high before moving the shutter is started. <br> If the input is logical high for a shorter time only a command to step the blinds will be sent. |

[^0]There are 7 options for each channel:

- Inactive,
- Switch,
- Scene,
- Counter,
- Send value,
- One Button Dimming,
- One Button Shutter.

### 5.2.6Switch

For example Input A:

Picture 7: Parameters Switch, switch rising edge

Picture 8: Parameters Switch, toggle rising edge

Picture 9: Parameters Switch, status send

Picture 10: Parameters Switch, switch short/long

| ETS-Text | Range [Default value] | Comment |
| :---: | :---: | :---: |
| Function | inactive <br> Switch <br> Scene <br> Counter <br> Send Value <br> One Button Dimming One Button Shutter [inactive] | The projected function can be here selected for each input. |
| Sub function | Switch rising edge Toggle rising edge Status send Switch short/long [Switch rising edge] | This parameter defines on which event the value of the object should be changed. |
| Contact Type | normally open normally closed [normally open] | Defines, if the connected contact at the input is normally opened (NO) or normally closed (NC). <br> If NO is selected, the input is logic high, after the contact is closed. |
| Value Rising Edge | $\begin{array}{\|l\|} \hline \text { off } \\ \text { on } \\ \text { [on] } \end{array}$ | This parameter is visible if Switch rising edge or Status send is selected. The defined value here will be sent to the object on a rising edge. |
| Value Falling Edge | $\begin{aligned} & \text { off } \\ & \text { on } \end{aligned}$ [off] | If Status send. <br> The defined value here will be sent to the object on a falling edge. |
| Behaviour after reset | do nothing send input state [do nothing] | If Status send. <br> After a bus reset whether no reaction or send the input state. |
| Send cyclic | disabled <br> if value $=1$ <br> if value $=0$ <br> if contact is opened or closed <br> [disabled] | If Status send. <br> If enabled, the objet value will be cyclically sent depending on this input value. |
| Cyclic send [s] | $\begin{array}{\|l} \hline 1 \ldots 3000 \mathrm{~s} \\ {[10]} \\ \hline \end{array}$ | Parameterised if send cyclic active. |
| Value short action | $\begin{aligned} & \hline \text { off } \\ & \text { on } \\ & \text { [off] } \end{aligned}$ | If switch short/long. <br> The defined value here will be sent to the object on a rising edge. |
| Value long action | $\begin{array}{\|l\|} \hline \text { off } \\ \text { on } \\ \text { [on] } \\ \hline \end{array}$ | If switch short/long. <br> The defined value here will be sent to the object on a rising edge. |
| Long operation after... | $\begin{aligned} & 0,3 ; 0,5 ; 0,7 ; 1 ; 1,5 ; 2 ; 2,5 ; 3 ; \\ & 3,5 ; 4 ; 5,5 ; 6 ; 7 ; 8 ; 9 ; 10 ; 15 ; \\ & 20 ; 30 \mathrm{sec} \\ & {[2,0 \mathrm{~s}]} \end{aligned}$ | If switch short/long. Duration which the input needs to be logical high before the function is started. If the input is logical high for a shorter time, only the command for short operation will be sent. |

Table 7: Parameter Switch

### 5.2.7 ScENE

Picture 11: Parameters Scene

| ETS-Text | Range <br> [Default value] | Comment <br> no save <br> save <br> [no save] Scene |
| :--- | :--- | :--- |
| Scene | Defines save or no save for an 8-Bit- <br> Scene. <br> Or a 1-Bit-Scene. <br> NOTE <br> Scene saved after a signal <br> duration of min. 3 sec. |  |
| Contact Type | normally open <br> normally closed <br> [normally open] | Defines, if the connected contact at the <br> input is normally opened (NO) or normally <br> closed (NC). <br> If NO is selected, the input is logic high, <br> after the contact is closed. |
| Scene Number | $1 \ldots 64$ <br> [Scene 1] | 64 possible 8-Bit-Scenes. <br> Each scene can be recalled (only if no <br> save or save parameterised). |
| Scene Number | $1,2$. <br> [Scene 1] | If 1-Bit-Scene parameterised. |

Table 8: Parameter Scene

### 5.2.8 COUNTER

Picture 12: Parameters Counter

| ETS-Text | Range [Default value] | Comment |
| :---: | :---: | :---: |
| Count edge | rising <br> falling rising and falling [rising] | Determines on which edge(s) the counter increases. |
| Contact Type | normally open normally closed [normally open] | Defines, if the connected contact at the input is normally opened (NO) or normally closed (NC). <br> If NO is selected, the input is logic high, after the contact is closed. |
| Counter Type | $\begin{aligned} & \hline \text { 8-bit } \\ & \text { 16-bit } \\ & \text { 32-bit } \\ & \text { [8-bit] } \end{aligned}$ | 3 possible counters. <br> To be defined according to the application. |
| Threshold active | $\begin{aligned} & \text { no } \\ & \text { yes } \\ & \text { [no] } \end{aligned}$ | To be set "yes" if a counter limit is needed. |
| Counter Limit | $\begin{aligned} & 0 \ldots 255 \\ & {[50]} \end{aligned}$ | 8-bit counter and threshold active. |
| Sending Difference | $0 \ldots 255$ <br> [5] | For 8-bit counter. <br> Object sent if the parameterised difference is reached. |
| Counter Limit | $\begin{aligned} & 0 \ldots 65535 \\ & {[200]} \end{aligned}$ | 16-bit counter and Threshold active |
| Sending Difference | $\begin{aligned} & 0 \ldots 65535 \\ & {[100]} \end{aligned}$ | For 16-bit counter. <br> Object sent to the object if parameterised difference reached. |
| Counter Limit | $\begin{aligned} & 0 \ldots 2147483647 \\ & {[500]} \end{aligned}$ | 32-bit counter and Threshold active |
| Sending Difference | $\begin{aligned} & 0 \ldots 65535 \\ & \text { [250] } \end{aligned}$ | For 32-bit counter. <br> Object sent to the object if parameterised difference reached. |
| Write Value via KNX | disabled enabled [enabled] | To be enabled if a value is to be written in a counter via KNX bus. |

Table 9: Parameter Counter
5.2.9 SEND value

Picture 13: Parameters Send Value

| ETS-Text | Range [Default value] | Comment |
| :---: | :---: | :---: |
| Send Value | Send on rising edge Send on both edges Send on short/long Send on long [Send on rising edge] | Here is to parameterise when the object is to be sent. |
| Contact Type | normally open normally closed [normally open] | Defines, if the connected contact at the input is normally opened (NO) or normally closed (NC). <br> If NO is selected, the input is logic high, after the contact is closed. |
| Value Type | Percent <br> Angle <br> Temperature <br> 2-bit value (forced operation) <br> 8 -bit value <br> 16-bit value <br> [Percent] | 6 different types of values can be parameterised. <br> See parameters below. |
| Value rising edge or Value short action | $\begin{aligned} & 0 . .100 \%(0 ; 0,01 ; 0,02 ; 0,03 \\ & \ldots .1) \\ & {[0]} \end{aligned}$ | According Send Value and Value Type "Percent". |
| Value falling edge or Value long action | $\begin{aligned} & 0 \ldots 100 \%(0 ; 0,01 ; 0,02 ; 0,03 \\ & \ldots .1) \\ & {[0]} \\ & \hline \end{aligned}$ | According Send Value and Value Type "Percent". |
| Value rising edge or Value short action | $\begin{aligned} & 0 \ldots 360^{\circ}\left(0^{\circ} ; 5^{\circ} ; 10^{\circ} ; 15^{\circ} ; \ldots\right. \\ & \left.360^{\circ}\right) \\ & {[0]} \end{aligned}$ | According Send Value and Value Type "Angle". |
| Value falling edge or <br> Value long action | $\begin{aligned} & 0 \ldots 360^{\circ}\left(0^{\circ} ; 5^{\circ} ; 10^{\circ} ; 15^{\circ} ; \ldots\right. \\ & \left.360^{\circ}\right) \\ & {[0]} \end{aligned}$ | According Send Value and Value Type "Angle". |
| Value rising edge or Value short action [in $1 / 100^{\circ}$ ] | $\begin{aligned} & -27300 \ldots 32000 \\ & {[0]} \end{aligned}$ | According Send Value and Value Type "Temperature". |
| Value falling edge or Value long action [in $1 / 100^{\circ}$ ] | $\begin{aligned} & -27300 \ldots 32000 \\ & {[0]} \end{aligned}$ | According Send Value and Value Type "Temperature". |

Multi IO 12
Apricum

| ETS-Text | Range [Default value] | Comment |
| :---: | :---: | :---: |
| Value rising edge or Value short action | ON, activate forced OFF, activate forced deactivate forced [deactivate forced] | According Send Value and Value Type "2Bit". |
| Value falling edge or Value long action | ON, activate forced OFF, activate forced deactivate forced [deactivate forced] | According Send Value and Value Type "2Bit". |
| Value rising edge or Value short action | $\begin{aligned} & 0 . . .255 \\ & {[0]} \\ & \hline \end{aligned}$ | According Send Value and Value Type "8Bit". |
| Value falling edge or Value long action | $\begin{aligned} & 0 \ldots 255 \\ & {[0]} \\ & \hline \end{aligned}$ | According Send Value and Value Type " 8 Bit". |
| Value rising edge or Value short action | $\begin{aligned} & 0 \ldots 65535 \\ & {[0]} \end{aligned}$ | According Send Value and Value Type "16-Bit". |
| Value falling edge or Value long action | $\begin{aligned} & 0 \ldots 65535 \\ & {[0]} \\ & \hline \end{aligned}$ | According Send Value and Value Type "16-Bit". |

Duration which the input needs to be logical high before "send value" is started. If the input is logical high for a shorter time, only the command for short operation will be sent. |

Table 10: Parameter Send Value

### 5.2.10 One Button Dimming

Picture 14: Parameters One Button Dimming

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Contact Type | normally open <br> normally closed <br> [normally open] | Defines, if the connected contact at the <br> input is normally opened (NO) or normally <br> closed (NC). <br> If NO is selected, the input is logic high, <br> after the contact is closed. |
| Long operation after... | 0,$3 ; 0,5 ; 0,7 ; 1 ; 1,5 ; 2 ; 2,5 ; 3 ;$ <br> 3,$5 ; 4 ; 5,5 ; 6 ; 7 ; 8 ; 9 ; 10 ; 15 ;$ <br> $20 ; 30$ sec <br> $[\mathbf{2 , 0 s}]$ | Duration which the input needs to be <br> logical high before dimming is started. <br> If the input is logical high for a shorter time <br> only a switch command will be sent. |

Table 11: Parameter One Button Dimming

### 5.2.11 One Button Shutter

Picture 15: Parameters One Button Shutter

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Contact Type | normally open <br> normally closed <br> [normally open] | Defines, if the connected contact at the <br> input is normally opened (NO) or normally <br> closed (NC). <br> If NO is selected, the input is logic high, <br> after the contact is closed. |
| Long operation after... | 0,$3 ; 0,5 ; 0,7 ; 1 ; 1,5 ; 2 ; 2,5 ; 3 ;$ <br> 3,$5 ; 4 ; 5,5 ; 6 ; 7 ; 8 ; 9 ; 10 ; 15 ;$ <br> $20 ; 30$ sec <br> [2,0s] | Duration which the input needs to be <br> logical high before moving the shutter is <br> started. <br> If the input is logical high for a shorter time <br> only a switch command will be sent. |

Table 12: Parameter One Button Shutter

### 5.3 SETTINGS OUTPUTS

### 5.3.1 General Settings

Picture 16: Parameters General Settings

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Group settings for <br> Outputs | All channels separated <br> A-L together <br> A-F together / G-L separated <br> A-F separated / G-L together <br> A-F together / G-L together <br> [All channels separated] | Depending on how the channels are going <br> to be used, it is to be defined here if <br> "separated" or "together". |
| Central Switch-Object | WARNING <br> By changing this parameter all settings <br> could be lost! <br> enabled <br> [disabled] | If enabled the corresponding objet <br> appears for all outputs. <br> This function simplifies for the user to <br> project the application and makes use of <br> less association. |
| Central Scene-Object | disabled <br> enabled <br> [disabled] | Same as above. |
| Central Force-Object | disabled <br> enabled <br> [disabled] | This is a 2-bit-object. <br> Same as above. <br> enabled <br> [disabled] |
| Central Interlock- <br> Object | This is a 1-bit object. <br> Same as above. <br> [1 s] sec | Delay for all outputs (e.g. for "behaviour at <br> reset") |
| Startup delay [s] | Sabl\| |  |

Table 13: Parameter General Settings

### 5.3.2 Configuration Outputs

Picture 17: Parameters Configuration Outputs

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Output A-L | not active <br> Switch <br> Staircase <br> [not active] | 2 possible functions can be defined or <br> corresponding channel is "not active". |

Table 14: Parameter Configuration Outputs

### 5.3.3SwITCH

Picture 18: Parameters Output Switch

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Type | normally open <br> normally closed <br> [normally open] | Defines, if the connected contact at the <br> output is normally opened (NO) or <br> normally closed (NC). <br> If NO is selected, the contact will be <br> closed on logic high. |
| On Delay [s] | $0 \ldots 30000$ <br> [0] | Delay until the switch reacts for "on". Can <br> be here parameterised in seconds. |
| Off Delay [s] | 0.. 30000 <br> [0] | Delay until the switch reacts for "off". Can <br> be here parameterised in seconds. <br> enabled <br> [disabled] |
| Scene | nothing <br> Locking operation <br> Priority function <br> [nothing] | If enabled, opens a Subpage "Scene" in <br> the "General Settings Outputs". |
| Higher priority <br> functions | If enabled, opens a Subpage "Priority" in <br> the "General Settings Outputs". |  |
| Central Switch <br> active <br> function <br> [not active] | This parameter can enable the central <br> switch function (if enabled) or not. |  |
| Hour Counter | disabled <br> enabled <br> [enabled] | If enabled, opens a Subpage "Counter" in <br> the "General Settings Outputs". |

| Logic | not active with one Object with two Objects [not active] | If enabled, the following 3 parameters appear beneath and are to be parameterised. <br> Only one type of object (OR or AND) if "with two objects" selected. |
| :---: | :---: | :---: |
| Logic operation | OR AND [OR] | Two possible logic operations. |
| Invert logic objects | not inverted inverted <br> [not inverted] | Logic objects can be here inverted if needed for the application. |
| Object value after Bus return | off <br> on <br> send read request <br> [off] | The object value after a bus recovery can be predefined "on" or "off", or a "read request" for the object will be sent previously. |
| Failure behaviour | disabled enabled [disabled] | If enabled, opens a Subpage "Failure" in the "General Settings Outputs". |
| Switch direct from Input | disabled enabled [disabled] | If enabled, the following 2 parameters appear beneath and are to be parameterised. |
| Input Number | according to Output No <br> A....L <br> [according to Output No] | This parameter is used to set whether and which binary inputs are to have a direct effect on the respective outputs. With the direct effect of an input on the output of the same name, every signalchange from " 0 " to " 1 " at the input leads to a switching condition change at the output. |
| Switch on rising / falling | toggle / on / on / off [on/-] | A signal change at the input has a direct change at the output. A change can toggle the output, set it "on" or "on/off". |

Table 15: Parameters Output Switch

### 5.3.4STAIRCASE

Picture 19: Parameters Output Staircase

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Type | normally open <br> normally closed <br> [normally open] | Defines, if the connected contact at the <br> output is normally opened (NO) or <br> normally closed (NC). <br> If NO is selected, the contact will be <br> closed on logic high. |
| Switch on timeout | $0 \ldots . .30000$ <br> [90] | See diagram below. |
| Retrigger timeout | disabled <br> enabled <br> [disabled] | See diagram below. |
| Switch off before <br> timeout | disabled <br> enabled <br> [disabled] | See diagram below. |
| Switch off warning | disabled <br> enabled <br> [disabled] | If enabled, the following 2 parameters <br> appear beneath and are to be <br> parameterised. |
| Prewarning time | 0...30000 <br> [5] | See diagram below. |
| Prewarning Switch off <br> time | 0...30000 <br> [2] | See diagram below. |

| Higher priority <br> functions | nothing <br> Locking operation <br> Priority function <br> [nothing] | If enabled, opens a Subpage "Priority" in <br> the "General Settings Outputs". |
| :--- | :--- | :--- |
| Central Switch <br> function | not active <br> active <br> [not active] | disabled <br> enabled <br> [disabled] |
| Hour Counter | disabled <br> enabled <br> [disabled] | This parameter can enable the central <br> switch function (if enabled) or not. |
| Failure behaviour | disabled <br> enabled <br> [disabled] | If enabled, opens a Subpage "Counter" in <br> the "General Settings Outputs". <br> the "General Settings Outputs". |
| Switch direct from <br> Input | according to Output No <br> A....L <br> [according to Output No] <br> If enabled, the following 2 parameters <br> parameterised. |  |
| Input Number | This parameter is used to set whether and <br> which binary inputs are to have a direct <br> effect on the respective outputs. <br> With the direct effect of an input on the <br> output of the same name, every signal- <br> change from "0" to "1" at the input leads to <br> a switching condition change at the <br> output. |  |
| Switch on rising / <br> falling | on / - <br> on off <br> [on / -] | A signal change at the input has a direct <br> change at the output. A change can set <br> the output "on" or "on/off". |

Table 16: Parameters Output Staircase

## Retrigger Timeout

### 5.3.5SUBPAGE PRIORITY LOCKING

| (-1.0.2 Multi IO |  |  |  |
| :---: | :---: | :---: | :---: |
| General Settings <br> General Settings Inputs Configuration Input-Channels Input A Input B | Priority - A |  |  |
|  | Lock function | locked wih | $\checkmark$ |
|  | State at the beginning of locking | no chang | $\checkmark$ |
| General Settings Outputs | State at the end of locking | no chang | $\bullet$ |
| Staircase Output - A | Lock state after bus return | enabled | - |
| Prionty - A | Central Interlock | disabled |  |

Picture 20: Parameters Priority Locking

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Lock function | locked with value 1 <br> locked with value 0 <br> [locked with value 1] | Lock function depending on the value <br> received. For example if "value 1" defined <br> and log. 1 is received, then is locking <br> enabled. |
| State at the beginning <br> of locking | off <br> on (Switch) <br> on (Staircase) <br> no change <br> [no change] | Parameter to define the channel state at <br> the beginning of locking. If "no change" <br> then priority goes to the higher function. |
| State at the end of <br> locking | off <br> on <br> no change <br> [no change] | Parameter to define the channel state at <br> the end of locking. If "no change" then <br> priority goes to the higher function. |
| Lock state after bus <br> return | enabled <br> locked <br> send read request <br> [enabled] | Channel state is enabled, locked or a read <br> request is sent after bus recovery. This is <br> a security function. |
| Central Interlock | disabled <br> enabled <br> [disabled] | This parameter can enable the central <br> Interlock function (if enabled) or not. |

Table 17: Parameters Priority Locking

### 5.3.6SUbPAGE PRIority Force

Picture 21: Parameters Priority Force

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Lock state after bus <br> return | enabled <br> locked - on <br> locked - off <br> send read request <br> [enabled] | Parameter is to define if after a bus <br> recovery the state of the channel is <br> enabled (as it was before bus reset) or <br> locked on/off or a "read request" is to be <br> sent previously. |
| Central Force | disabled <br> enabled <br> [disabled] | This parameter can enable the central <br> Force function (if enabled) or not. |

|  | Scene 8-State | off | $\square$ |

Picture 24: Parameters Scene

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Scene saving enable | blocked <br> free <br> [blocked] | If parameterised "free": scenes can be <br> saved "externally". If "blocked", no scene <br> can be saved. <br> NOTE <br> A download in the ETS will overwrite <br> every saved scene! |
| Central Scene | disabled <br> enabled <br> [disabled] | If parameterised "enabled" a central scene <br> can control this output. |
| Scene 1 - Address | not used <br> $1-64$ <br> [not used] | One of 64 scenes can be selected for this <br> output. |
| Scene 1- State | off <br> on <br> [off] | Defines the current switching status of the <br> output for this scene. |
| $\ldots$ | not used <br> $1-64$ <br> [not used] | Same as above. <br> on <br> [off] |
| Scene 8-Address | Same as above. |  |
| Scene 8- State |  |  |

### 5.3.9Subpage Failure Behaviour

| [\|I. 1.0.2 Multi IO |  |  |  |
| :---: | :---: | :---: | :---: |
| General Settings <br> General Settings Inputs <br> Configuration Input-Channels Input A Input B <br> General Settings Outputs Configuration Output-Channels Switch Output - A Scene-A <br> Failure - $A$ | Failure - A |  |  |
|  |  |  |  |
|  | Behaviour at bus power down | no change |  |
|  | Behaviour at bus power up | no change |  |
|  | Behaviour at reset | no change | $\checkmark$ |
|  | Behaviour before power down | no change |  |
|  |  |  |  |

Picture 25: Parameters Failure Behaviour

| ETS-Text | Range <br> [Default value] | Comment |
| :--- | :--- | :--- |
| Behaviour at bus <br> power down | off <br> on (Switch) <br> on (Staircase) <br> no change <br> [no change] | If Bus power is down it should be here <br> defined which state the actuator should <br> take in this case (for security reasons too). <br> off (Switch) <br> on (Staircase) <br> no change <br> value as before (Switch) <br> [no change] |
| Behaviour at bus <br> power up | off <br> on (Switch) <br> on (Staircase) <br> no change <br> value as before (Switch) <br> [no change] | If Bus power is (re)started it should be <br> here defined which state the actuator <br> should take in this case (for security <br> reasons too). |
| Behaviour at reset | If a Reset occurs it should be here defined <br> which state the actuator should take in this <br> case (for security reasons too). |  |
| Behaviour before <br> on (Switch) <br> power down (Staircase) | no change <br> [no change] | Before the Bus power is down it should be <br> here defined which state the actuator <br> should take in this case (for security <br> reasons too). |

Table 21: Parameters Failure Behaviour

## 6 Glossary

## Communication Objects

See Group Communication Object

## Group address (GA)

Group addresses are used to link group communication objects.
See Group Communication Object

## Group Object

See Group Communication Object

## Group Communication Objects

Group communication objects contains the data points which are transmitted via runtime communication. One or more group addresses can be assigned to group communication objects. Always on group address is the sending address. Via this address the values of the group communication object are sent on the bus. The other group addresses are only used to receive values.
Other words for group communication object are

- group object
- communication objects

## Physical Address

This address is the unique device address inside a KNX-System. This address is independent of the group addresses and is used for configuration of the device.
